

Troubleshooting TASC 6100

Problem: The console does not turn on.

Solution: The TASC 6100 console is a small computer that mounts inside the cab of your truck or tractor. Finding the problem will require a systematic search for the problem.

1. Check your console. Is it plugged in to power?
2. Check the fuses at the battery. You have 2 fuses. Make sure both are functioning properly.
3. Check all cable connections. The connection should be secure at the back of the console.
4. Check your power cable. Disconnect the power cable from the back of the console. With a volt meter, check that you have 12 volts coming through the cable. If you have power, send the console to TeeJet for repair. If there is no power reading, replace the power cable MD-8790074
